

SYNCUP - Node.js + Next.js Assessment

Duration: 2-3 Hours

Task: Build a small realtime coaching feed application.

Requirements:

1. Create APIs using Node.js and Express.
2. Create GET /feed and POST /feed APIs.
3. Store data in MongoDB or PostgreSQL.
4. Use Redis cache for GET /feed.
5. Use WebSockets or Socket.IO for realtime updates.
6. Create simple Next.js frontend pages.
7. Show realtime updates on frontend without refresh.

Frontend Pages:

- Home Page → show feeds
- Admin Page → add feed

What We Check:

- API understanding
- Redis caching
- WebSocket handling
- DB usage
- Debugging skills
- Realtime thinking

Bonus:

- Handle reconnects
- Prevent duplicate socket events
- Add loading/error handling

Evaluation:

- Code quality
- Problem solving
- Realtime implementation
- Scalability thinking
